```

Create the Prediction Tasks for Each Provider

```r
make_task = function(dataset, task_id) {
  task = TaskRegr$new(
    id = task_id,
    backend = dataset %>% select(-drive_id, -timestamp, -provider, -scenario),
    target = "throughput_mbits"
  )

  task$col_roles$name = "row_id_original"
  task$col_roles$feature = setdiff(task$col_roles$feature, "row_id_original")

  return(task)
}

task_ul_o2 = make_task(dataset_ul_o2, "task_ul_o2")
task_ul_o2
```

```
## <TaskRegr:task_ul_o2> (2039 x 11)
## * Target: throughput_mbits
## * Properties: -
## * Features (10):
##   - dbl (9): acceleration_mpss, cqi, f_mhz, payload_mb, rsrp_dbm,
##     rsrq_db, rssnr_db, ta, velocity_mps
##   - fct (1): enodeb
```

```r
task_ul_tmobile = make_task(dataset_ul_tmobile, "task_ul_tmobile")
task_ul_tmobile
```

```
## <TaskRegr:task_ul_tmobile> (2301 x 11)
## * Target: throughput_mbits
## * Properties: -
## * Features (10):
##   - dbl (9): acceleration_mpss, cqi, f_mhz, payload_mb, rsrp_dbm,
##     rsrq_db, rssnr_db, ta, velocity_mps
##   - fct (1): enodeb
```

```r
task_ul_vodafone = make_task(dataset_ul_vodafone, "task_ul_vodafone")
task_ul_vodafone
```

```
## <TaskRegr:task_ul_vodafone> (1828 x 11)
## * Target: throughput_mbits
## * Properties: -
## * Features (10):
##   - dbl (9): acceleration_mpss, cqi, f_mhz, payload_mb, rsrp_dbm,
##     rsrq_db, rssnr_db, ta, velocity_mps
##   - fct (1): enodeb
```

Create Data Splitting Strategies for Testing and Validation

```r
make_outer_resampling = function(task, drive_ids_train, drive_ids_test) {
  row_ids_train = (
    tibble(task$row_names) %>%
      inner_join(dataset_ul, by=c("row_name"="row_id_original")) %>%
      filter(drive_id %in% drive_ids_train)
  )$row_id

  row_ids_test = (
    tibble(task$row_names) %>%
      inner_join(dataset_ul, by=c("row_name"="row_id_original")) %>%
      filter(drive_id %in% drive_ids_test)
  )$row_id

  result = rsmp("custom")
  result$instantiate(task, train_sets=list(row_ids_train), test_sets=list(row_ids_test))
  return(result)
}
```

Create the Prediction Pipeline for Each Provider

```r
make_learner = function() {
  factor_encoding = po(
    "encode",
    method = "one-hot",
    affect_columns = selector_type("factor")
  )
  xgboost = lrn("regr.xgboost", nrounds=100) # default to 100 boosting rounds
  pipe = factor_encoding %>>% PipeOpLearner$new(xgboost)
  learner = GraphLearner$new(pipe)
  return(learner)
}

learner_ul_o2 = make_learner()
learner_ul_tmobile = make_learner()
learner_ul_vodafone = make_learner()
```

Here we can see the prediction pipeline:

```r
learner_ul_o2$graph$plot()
```

<INPUT>

↓

encode

↓

regr.xgboost

↓

<OUTPUT>
Validation Results
